

NESAm - Software Requirements Specification (SRS)

Version: 1.19

Date: December 26, 2025

Owner: IRTT Alumni Association (IRTAA)

1. Introduction

1.1 Purpose

The purpose of this document is to define the functional and non-functional requirements for the **NESAm** software ecosystem. This system aims to digitize the operations of the alumni welfare program, which operates on a crowdfunding model known as "Death Fraternity Contribution" (DFC).

1.2 Scope

The software solution will consist of three primary components:

1. **Mobile Application (iOS & Android):** For alumni members to register, pay fees, view status, and receive demise notifications.
2. **Web Admin Portal:** For the NESAm Committee to manage members, verify documents, trigger demise events, calculate DFC collections, and process claims.
3. **Analytics & Dashboards:** A suite of visualization tools for both members and the committee to track member statistics, growth trends, benefited families, and the overall social impact of the program.

1.3 Key Definitions & Acronyms

- **DFC (Death Fraternity Contribution):** Variable financial contribution collected from active members upon the demise of a fellow member.
- **Advance DFC (Security Deposit):** A one-time refundable deposit collected during registration. **Crucial:** This amount remains untouched in the user's wallet as a security buffer and is **not** used for regular contribution payments. It is only utilized for adjusting dues upon Lapsing or Death Settlement.
- **Founding Member:** An honorary status automatically assigned to any member registering within a specific window (e.g., 3 months) of the program launch.
- **Life Member:** A registered member of the IRTAA who has paid the applicable one-time membership fees.
- **Patron Member:** A specific membership tier within the parent IRTAA association, typically involving a higher contribution than a Life Member.

- **Dormant Period:** A waiting period post-registration during which natural death claims are not honored.
- **Lapsed Member:** A member who failed to pay DFC dues after the notice period and grace period.
- **User UUID:** An immutable, system-generated unique identifier for a user profile, independent of their mobile number.

2. User Roles and Permissions

The system implements a granular Role-Based Access Control (RBAC) system.

Role	Responsibility	Key Permissions
Guest	Non-registered User / Public.	View public landing page, "About NESAm", Download Bylaws, View Anonymized Impact Stats.
Member	Active NESAm Participant.	Register, Pay Fees, Upload Docs, View Ledger, Add Nominees, View Personal Impact.
Volunteer	Outreach & Onboarding Support.	View non-sensitive member growth stats, Generate referral links, Assist with FAQ/Support queries.
Verifier	Operational Integrity.	Verify Documents (ID Cards, Self-Declarations), Verify Death Reports (Death Certificates), Flag suspicious applications.
Treasurer	Financial Oversight.	Manage Collections , Reconcile Payment Gateway, Approve Claim Settlements , View Financial Dashboards, Manage Advance DFC adjustments.
Admin	Governance & Config.	System Configuration (Fee Slabs, Age Bands), User Management (Assign Volunteer/Verifier roles), Dispute Resolution, Master Data Management (Parent DB Sync).
Auditor	Compliance Review.	Read-Only Access to: Financial Transaction Logs, Admin Action Logs, System Health Reports.

3. Functional Requirements: Mobile Application (Member & Guest)

3.1 Authentication

- **FR-MA-00 (OTP Login & Identity):**
 - The primary login method shall be **Mobile Number + OTP**.
 - Passwords are not required for member login.
 - **Architecture Note:** The Mobile Number is the *access credential*. The system internally tracks the user via an immutable **User UUID**.

3.2 Registration & Eligibility

- **FR-MA-01 (Parent DB Lookup):**
 - The system must validate the user against the **Parent Association Database** (uploaded/managed by Admin).
 - **Check:** Is the user listed?
 - **Retrieve Status:** Is the user a *Life Member* or *Patron Member*? (This status is pre-determined in the parent DB, not calculated by NESAm).
 - If not found, deny registration and prompt to contact Admin.
- **FR-MA-02 (Age Validation):** The system must prevent registration if the user is **60 years or older** on the date of payment.
- **FR-MA-03 (Joint Accounts):** The system must enforce individual registration. Spouses or siblings who are both alumni must have separate accounts.

3.3 Dynamic Fee Calculation Engine

The system must automatically calculate the **One-Time Membership Fee** and **Advance DFC** based on the following logic:

- **FR-MA-04 (Age Basis):** Fee calculation is based on "Completed Age" on the date of payment.
- **FR-MA-05 (Slab Optimization):**
 - **Regular Members:** Fee is based strictly on the Age Slab active at the time of registration.
 - **Patron & Founding Members:** The system must compare the fee for the *Age Slab* against the *Graduation Year Slab* and apply the **lower** of the two.
 - **Note:** Graduation Year is captured from user input (validated) to perform this optimization.
 - **Note:** "Patron" status is derived from the lookup in FR-MA-01.
- **FR-MA-06 (Discounts):**
 - **Founding Member:** Apply **Founding_Discount_%** (Automatic tag if joined within the configured "Founding Window").
 - **Patron Member:** Apply **Patron_Discount_%** (Based on Parent DB status).
 - **Founding Patron:** Apply **Founding_Patron_Discount_%** (Cumulative).
 - **Note:** These percentages are configured in FR-WEB-17.
- **FR-MA-07 (Advance DFC Calculation):**
 - The Advance DFC acts as a **Security Deposit**.

- **Formula:** Advance DFC = (DFC Rate for User's Age) * (ADVANCE_DFC_MULTIPLIER).
- The system must look up the DFC Rate (FR-WEB-16) and the Multiplier (FR-WEB-17) to perform this calculation dynamically at the time of payment.

3.4 Application Submission

- **FR-MA-08 (Document Upload):** Users must upload scanned copies/images of:
 - IRTTAA Membership Card.
 - Self-Declaration Form (Annexure C).
- **FR-MA-09 (Nominee Management):**
 - Users can add multiple nominees.
 - Must specify the **Percentage (%) Share** for each nominee (total must equal 100%).
- **FR-MA-10 (Legal Heir):** Optional field to declare a Legal Heir if nominees are unavailable.

3.5 Payments & Wallet

- **FR-MA-11 (Payment Gateway):** Integration to collect the initial "Total Payable" (Membership Fee + Advance DFC).
- **FR-MA-12 (Wallet & Security Deposit):** * The app shall display a "Wallet" section.
 - **Advance DFC Balance:** Shown as a static "Security Deposit" (e.g., ₹2,500). This balance is **Locked** and cannot be used for payments unless authorized by Admin intervention (Lapsing/Death).
- **FR-MA-13 (Active Dues & Payments):** * The Wallet shall have a section for "**Pending Dues**" (Demand Notices).
 - Users must be able to select pending DFC demands and pay them via Payment Gateway/UPI.
 - **Action:** "Pay Now" button triggers the payment flow. The Advance DFC balance remains untouched.

3.6 Status & Notifications

- **FR-MA-14 (Real-time Status):** Dashboard must prominently display status: *Active*, *Notice Period*, or *Lapsed*.
- **FR-MA-15 (Demise Alerts):** Push notifications when a DFC contribution is required due to a member's death.

3.7 Impact & Transparency Dashboards (Member View)

- **FR-MA-16 (Program Stats):** The member home screen shall display live counters for:
 - Total Active Members.
 - Total Families Benefited (Claims Settled).
 - Total Assistance Provided (Cumulative ₹).
- **FR-MA-17 (Personal Impact):** A view showing the individual member's contribution history (e.g., "You have supported 3 families this year").

3.8 Guest Access

- **FR-MA-18 (Public View):** Guests must be able to view the "About NESAm" page, Eligibility Criteria, and Bylaws without logging in.
- **FR-MA-19 (Impact Teaser):** Guests see anonymized counters of Total Families Benefited and Total Amount Disbursed to build trust.

3.9 Profile & Account Management

- **FR-MA-20 (Lapsed Member Renewal):**
 - If a user logs in and their status is **Lapsed**, the dashboard shall disable "Pay Dues" and instead show a "Apply for New Membership" button.
 - This action triggers a new application flow. Fees are calculated based on *current* age and *current* Fee Slabs.
 - **Data:** The system retains the existing User Profile (UUID) but generates a *new* NESAm Membership ID.
- **FR-MA-21 (Profile Updates):**
 - Authenticated users must be able to easily update non-critical profile fields.
 - **Editable Fields:** Residential Address, Email Address, Mobile Number, Nominee Details (Names, Relationships, Shares).
 - **Verification:** Updating the **Mobile Number** requires OTP verification of the *new* number only.
 - **Read-Only Fields:** Date of Birth, Graduation Year, Full Name, and Membership Type (Life/Patron). These fields are locked after initial verification as they determine financial liabilities.

3.10 History & Receipts

- **FR-MA-22 (Transaction History):**
 - The Mobile App must provide a "Passbook" or "History" view containing a chronological list of all financial transactions.
 - **Credit Events (Inflow):** Membership Fee Payments, DFC Payments (Dues Cleared).
 - **Debit Events (Outflow):** Invoice Generation (Demand Note created).
 - **Receipt Generation:** For every Credit Event (Payment made by user), the system must allow the user to download a **PDF Receipt** containing Transaction ID, Date, Amount, and NESAm branding.

3.11 Notification Center

- **FR-MA-23 (Consolidated Inbox):**
 - The Mobile App must have a "Notification Center" that displays a history of all alerts received by the member.
 - **Intent-Based Grouping:** The view must show the *Intent* of the message (e.g., "Payment Reminder", "Demise Alert", "Deposit Demand") rather than duplicate entries for every channel (SMS/Email/Push).
 - **Read/Unread Status:** Visual indicators for unread messages.

- **Retention:** Notifications should be viewable for a minimum of 12 months.

4. Functional Requirements: Web Admin Portal

4.1 Member Onboarding & Verification

- **FR-WEB-01 (Verification Queue - Verifier):** Interface for the **Verifier** to review pending applications, cross-check IRTTAA ID cards, and validate Self-Declarations.
- **FR-WEB-02 (Approval/Rejection):**
 - **Verifier** marks documents as "Verified" or "Defective".
 - System automatically Approves membership once Payment is confirmed AND Documents are Verified.
- **FR-WEB-03 (Founding Tag):** System automatically tags members as "Founding Members" if the application date is within the configured **Founding Window** (See FR-WEB-17).
- **FR-WEB-04 (Parent DB Management):** Admin interface to upload/update the "Parent Association Database" (CSV/Excel import) used for lookup validation.

4.2 "Demise Event" & Contribution Engine (Core Logic)

- **FR-WEB-05 (Event Trigger - Verifier):** Form for **Verifier** to record a member's death.
 - Requires upload of **Death Certificate**.
 - Input: *Deceased Member ID, Date of Death*.
- **FR-WEB-06 (Global Demand Generation - System):** Upon verification of a Demise Event, the system must generate a **Payment Request (Invoice)** for **every other active member**.
 - **Logic:** The amount (₹100 - ₹500) is determined by the **Contributor's Age** looking up the **DFC Slab** active on the **Date of Demise**.
 - **Exemptions:**
 - **Senior Members:** Members > 70 years old do not contribute.
 - **Founding Members:** Contribute only for 20 years or until age 65 (whichever is earlier).
- **FR-WEB-07 (Collection Oversight - Treasurer):** The system tracks the status of these demands (Paid/Unpaid). The **Treasurer** monitors the collection progress via the dashboard.

4.3 Membership Lifecycle Management

- **FR-WEB-08 (Notice Period Logic):**
 - If a DFC Demand Invoice is unpaid after **30 days**, status changes to **Notice Period**.
 - Notice Period lasts for **1 year**.
- **FR-WEB-09 (Lapsing & Deposit Adjustment):**
 - If unpaid after Notice Period + **15 Days Grace**, status changes to **Inactive/Lapsed**.
 - **Deposit Adjustment:** The system automatically **liquidates** the member's Advance DFC (Security Deposit) to cover/write-off the pending dues. Any remaining balance is

forfeited to the association corpus (or refunded based on admin discretion/bylaws).

- **FR-WEB-10 (Rejoining Workflow):**
 - The system must allow a previously Lapsed user (identified by UUID) to initiate a **New Application**.
 - The system must enforce that a single User Account can have only **one** Active or Notice Period membership at a time.
 - Historical (Lapsed) membership records are archived for audit but not reactivated.

4.4 Claims Processing

- **FR-WEB-11 (Claim Validation - Verifier):**
 - **Verifier** checks: Is Program Activated? Is Deceased Member Active? Is Date of Death > Dormant Period?
- **FR-WEB-12 (Settlement Calculation & Adjustment):**
 - **Treasurer** reviews the calculated payout sum (based on collected DFC).
 - **Adjustment Logic:** If the deceased member had any **Pending Dues** (e.g., died during Grace Period), the system must **deduct** these dues from the Final Settlement Amount.
 - **Treasurer** authorizes the net disbursement to the Nominee's Bank Account.
- **FR-WEB-23 (Settlement Record Generation):**
 - Upon authorization, the system must lock the calculation into a permanent **Settlement Record**.
 - **Formula:** $\text{Gross_Collection} - \text{Pending_Dues} = \text{Net_Payout}$.
 - **Output:** A PDF **Settlement Statement** showing the breakdown, payment date, and transaction reference.

4.5 Analytics & Reporting (Treasurer & Auditor)

- **FR-WEB-13 (Growth Trends):** Interactive charts showing enrollment velocity and demographics.
- **FR-WEB-14 (Financial Health - Treasurer):**
 - DFC Collection Efficiency (Paid vs. Pending).
 - Advance DFC Float (Total refundable deposits held).
- **FR-WEB-15 (Audit Logs - Auditor):**
 - Read-only view of all manual overrides, verification actions, and financial disbursements.
- **FR-WEB-21 (Notification Audit Logs):**
 - **Admin View:** Admins must be able to view a log of all notifications sent to a specific member or broadcast to all.
 - **Channel Details:** The log must explicitly list which channels were attempted and their gateway status (e.g., "Email: Sent, SMS: Failed, Push: Delivered").
 - **Filter:** Ability to filter logs by Date Range, Member ID, or Notification Type (e.g., "Show all Lifecycle Warnings sent last week").

4.6 Configuration & Governance (Admin)

- **FR-WEB-16 (Temporal Configuration for Fees/Rates):**
 - The Admin must be able to update **Fee Slabs** (Membership Fees) and **DFC Rates**.
 - **Versioned Updates:** Updates must **not** override historical data. The system must store slab configurations with a Valid_From and Valid_To date.
 - **Application:**
 - **New Registrations:** Use the Fee Slab where Valid_From ≤ Current_Date ≤ Valid_To.
 - **Demise Events:** Use the DFC Rate Slab where Valid_From ≤ Date_Of_Demise ≤ Valid_To.
 - **Historical Reports:** Must reference the slab that was active at the time of the transaction.
- **FR-WEB-17 (Configurable Program Parameters):**
 - The following system variables must be configurable by the Admin (not hardcoded):
 - **Program Launch Date:** The reference date for the program start.
 - **Founding Window Duration:** (e.g., 90 days). Defines the cutoff for "Founding Member" status.
 - **Advance DFC Multiplier:** (e.g., 5). Defines the deposit calculation factor.
 - **Dormant Period Duration:** (e.g., 3 months).
 - **Notice Period Duration:** (e.g., 1 year).
 - **Discount Rates (New):**
 - Patron_Discount_% (e.g., 5%).
 - Founding_Discount_% (e.g., 10%).
 - Founding_Patron_Discount_% (e.g., 15%).

4.7 Notification & Scheduler Engine

- **FR-WEB-18 (Demise Broadcast & Demand):**
 - Upon **Verification** of a Demise Event, the system must broadcast notifications with **Conditional Messaging** based on member status:
 - **Target A: Contributors (< 70 Years & Active):**
 - **Message:** "We regret to inform you of the demise of [Name]. A payment request of [₹XXX] has been raised. Please pay via the app to support the family."
 - **Target B: Exempt Members (> 70 Years):**
 - **Message:** "We regret to inform you of the demise of [Name]. (No contribution is required as you are covered under the Senior Member Exemption)."
- **FR-WEB-19 (Automated Financial Scheduler):**
 - The system shall run a **daily background job** to enforce financial health.
 - **Task A: Outstanding Dues Check:** Identify members with unpaid DFC demand invoices.
 - Send **Gentle Reminders** at T+15 and T+25 days.
 - **Task B: Age Band Transition Check:**
 - Identify members whose age has crossed into a higher DFC Rate Slab as of

Current_Date.

- **Exemption Check:** If New_Age > 70, set Required_Advance_DFC = 0. **Do not** send demand notices.
- Else, Recalculate Required Advance DFC = New_Rate * Multiplier.
- If Security_Deposit_Balance < Required_Advance_DFC:
 - Calculate Differential_Amount = Required - Security_Deposit.
 - Send **Deposit Demand Notification**: "Happy Birthday! Your DFC slab has changed. Please top up ₹XXX to maintain the required Security Deposit."
- **FR-WEB-20 (Lifecycle Critical Alerts):**
 - **Notice Period Warning:** Sent at T+29 days (1 day before entering Notice Period).
 - **Lapse Warning:** Sent at T+350 days (15 days before permanent Lapsing).
 - **Channel:** SMS + Email + Push Notification (High Priority).
- **FR-WEB-22 (Policy Change Impact Processor):**
 - **Trigger:** Initiated automatically when Admin updates ADVANCE_DFC_MULTIPLIER or DFC_Rates (FR-WEB-16/17).
 - **Process:**
 1. System batches all active members.
 2. **Filter: Exclude** Members where Age > 70 (They are exempt from Advance DFC obligations).
 3. Recalculates New_Required_Advance for remaining members based on their current age and the new parameters.
 4. Checks Current_Security_Deposit vs New_Required_Advance.
 5. If Shortfall > 0, queues a **Deposit Demand Notification**.
 - **Message:** "NESAm Policy Update: The Advance DFC requirement has changed. Please top up ₹XXX to align with the new norms."

5. Non-Functional Requirements

5.1 Security

- **NFR-01 (Data Privacy):** PII (Personally Identifiable Information) and Nominee details must be encrypted at rest.
- **NFR-02 (Access Control):** Strict enforcement of the Roles defined in Section 2. **Auditors** must never have write access.

5.2 Performance & Reliability

- **NFR-03 (Batch Processing):** The Contribution Engine must process DFC calculations for 2,000+ members within 60 seconds of a Demise Event trigger.
- **NFR-04 (Availability):** 99.9% uptime required for the DFC collection module.

5.3 Audit & Compliance

- **NFR-05 (Financial Audit):** Immutable logs for all "Advance DFC" deductions and "Membership Fee" collections, accessible to the **Auditor**.

- **NFR-06 (Refunds):** Logic to handle refunds if the program fails to activate (Member count < 100 in 3 months).

6. Annexure: Logic Tables

6.1 Membership Fee Slabs (Regular)

Used for Fee Calculation Engine.

Age Range	Fee (₹)	Advance DFC (₹)	Total (₹)
Up to 25	2,000	500	2,500
26 - 30	3,500	1,000	4,500
31 - 35	5,000	2,000	7,000
36 - 40	7,000	2,500	9,500
41 - 45	9,000	2,500	11,500
46 - 50	11,500	2,500	14,000
51 - 55	14,000	2,500	16,500
56 - 60	16,500	2,500	19,000

6.2 DFC Contribution Rates

*Amount a member pays when **someone else** dies.*

Contributing Member's Age	DFC Amount (₹)
Up to 25	100
26 - 30	200
31 - 35	400
36 - 60+	500

(Note: Contribution stops at age 70)

7. Data Requirements (Data Dictionary)

This section defines the critical data fields to be captured and stored.

7.1 User Profile (Persistent Data)

This data belongs to the user identity and persists even if membership lapses or phone number changes.

Field Name	Type	Purpose
User UUID	UUID	System Primary Key. Immutable, internal identifier.
Mobile Number	Numeric	Login Credential & Contact. Unique constraint. Mutable.
Full Name	String	Official identity.
Email Address	String	Communication backup.
IRTAA ID	String	Link to parent association.

7.2 Membership Record (Transactional Data)

A user may have multiple membership records (e.g., one Lapsed, one Active).

Field Name	Type	Purpose
NESAm ID	String	Unique identifier for a specific membership instance.
User UUID	FK	Foreign Key linking to User Profile (Not Mobile #).
Start Date	Date	Enrollment Date for this instance.
Membership Status	Enum	Active / Notice / Lapsed / Deceased.
Advance DFC (Deposit)	Currency	Security Deposit. Locked funds.
Founding Tag	Boolean	Applied based on Start Date.

*(Note: The system enforces that a User UUID can have only **one** Active or Notice Period*

record at a time).

7.3 Member (Applicant) Data (Captured per Application)

Field Name	Type	Purpose
Date of Birth	Date	Critical for calculating Age Slabs and DFC Contribution rates.
Gender	Select	Demographic tracking.
Residential Address	String	KYC compliance.
Graduation Year	Year	Critical for Fee Slab Optimization.
Branch / Department	String	Record keeping.
IRTAA Status	Lookup	Value retrieved from Parent DB (Life / Patron).
ID Card Image	Image/PDF	Verification proof.
Self-Declaration	Boolean	Consent tick-box.

7.4 Nominee Data

Note: Users may add multiple nominees.

Field Name	Type	Purpose
Nominee Name	String	Identity of beneficiary.
Relationship	Select	E.g., Spouse, Child, Parent.
Date of Birth	Date	To identify if nominee is a minor.
Percentage Share	%	Allocation of claim amount (Must sum to 100%).
Mobile Number	Numeric	Contact for claim settlement.

7.5 Legal Heir (Optional Fallback)

Field Name	Type	Purpose
Heir Name	String	Fallback beneficiary if nominees are unavailable.
Relationship	Select	Relationship to member.

7.6 Configuration Master Data (System Settings)

The system uses three distinct tables to manage configuration and historical versioning.

7.6.1 Master_Fee_Slabs (Membership Fees)

Defines the One-Time Fee for age ranges.

Field Name	Type	Description
Slab ID	UUID	PK.
Min Age	Int	Lower bound of the age range (inclusive).
Max Age	Int	Upper bound of the age range (inclusive).
Display Label	String	User-friendly text (e.g., "26 - 30 Years").
Fee Amount	Currency	The non-refundable membership fee.
Valid From	Date	Start date of effectivity.
Valid To	Date	End date of effectivity (NULL for currently active).

7.6.2 Master_DFC_Rates (Contribution Rates)

Defines how much a member contributes when a peer dies.

Field Name	Type	Description
Rate ID	UUID	PK.
Min Age	Int	Lower bound of the contributor's age.
Max Age	Int	Upper bound of the contributor's age.

Display Label	String	User-friendly text (e.g., "31 - 35 Years").
DFC Amount	Currency	The contribution amount (e.g., ₹100, ₹500).
Valid From	Date	Start date of effectivity.
Valid To	Date	End date of effectivity.

7.6.3 System_Parameters (Global Config)

Stores scalar configuration values.

Field Name	Type	Description
Param ID	UUID	PK.
Param Key	String	Unique Key (e.g., "PATRON_DISCOUNT_PERCENT", "ADVANCE_DFC_MULTIPLIER").
Param Value	String	Value (Parsable based on context).
Description	String	Admin-facing description.
Last Updated At	DateTime	Audit timestamp.
Last Recalculated At	DateTime	When the "Policy Change Processor" (FR-WEB-22) last ran for this param.

7.7 Transaction Ledger

Stores the complete financial history for audit and receipts.

Field Name	Type	Description
Transaction ID	UUID	PK.
User UUID	FK	The member associated with the transaction.
Transaction Type	Enum	CREDIT (Payment), DEMAND (Invoice Raised), ADJUSTMENT (Lapse cover).

Amount	Currency	Value of transaction.
Reference	String	Payment Gateway Ref (for Credits) or Deceased Member ID (for Demands).
Status	Enum	PAID, PENDING, OVERDUE.
Timestamp	DateTime	When the transaction occurred.
Receipt URL	URL	Link to generated PDF receipt (for Credits).

7.8 Notification Logs

Stores both the high-level intent (for users) and the channel details (for audit).

Field Name	Type	Description
Notification ID	UUID	PK.
User UUID	FK	The recipient.
Intent Category	Enum	ALERT, REMINDER, INFO, DEMAND (Deposit Shortfall/Death DFC).
Display Title	String	The main headline shown in the App Notification Center.
Display Body	String	The optimized message content for the App view.
Channels Used	String	JSON/CSV of channels attempted (e.g., "SMS, EMAIL, PUSH").
Delivery Status	JSON	Technical status (e.g., {sms: "failed", email: "sent"}).
Sent At	DateTime	Timestamp.

7.9 Settlement Records (Claims Audit)

Permanent record of the final payout for each claim.

Field Name	Type	Description
Settlement ID	UUID	PK.
Deceased User UUID	FK	Link to the deceased member profile.
Gross Collection	Currency	Total DFC gathered from members.
Deducted Dues	Currency	Unpaid dues subtracted from payout.
Net Payout	Currency	Final amount disbursed (Gross - Deducted).
Nominee Snapshot	JSON	Frozen copy of Nominee details at time of payment.
Bank Ref	String	UTR / Transaction Reference Number.
Payment Date	Date	Date of transfer.
Approved By	FK	Treasurer UUID who authorized the payment.
